In my reply comment of yesterday, the formula for the relative population of a
city within a region by ranking of cities by size: 1,2,3,4,...r is
1,1/2,1/3,1/4,...1/r but due to a translation fault between formats the formula
came out listed as 1,1/2,_,1/4,...1/r. If you were to pencil in the 1/3 over
the underlined space it would be correct.
